About the 2013 Annual Report

For over 20 years, *America's Health Rankings*® has been tracking the state of our nation's health by studying numerous health measures to compile a comprehensive perspective on our nation's health issues, state by state.

View the Rankings

Overall Rankings

Smoking

Obesity

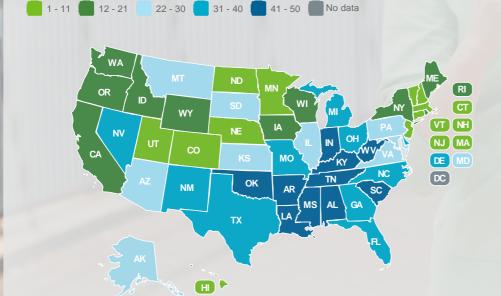

Physical Inactivity

Diabetes

Overall Rankings

Overall: Weighted sum of the number of standard deviations each core measure is from the national average.

Our health is impacted by a combination of individual choices, our environment, public policy and clinical care.

For over 20 years, *America's Health Rankings*® has been tracking the state of our nation's health by studying numerous health measures to compile a comprehensive perspective on our nation's health issues, state by state.

Search **the rankings** to discover little known facts and statistics, and find out how you can **take action** and become an advocate for improving our nation's health.

STATES DRIVING CHANGE

ASTHO, with support from the United Health Foundation, researched how America's Health Rankings® are used to improve health across the country. It found that the report is used in a variety of ways, but centered on three primary themes:

- Inform state health priorities.
- Influence state policies.
- Transform state health systems.

The following state snapshots illustrate how states translate America's Health Rankings® into action in an effort to drive change.

ARKANSAS

Arkansas ranks 49th in 2013. The Arkansas Department of Health uses America's Health Rankings® to: |More|

GEORGIA
